HOT SPOT HEATER

*"Voted Best Motor Sport
Accessory of the Year"*

This unit keeps you warm on those cold rides. The way it works is it draws heat from the hot engine and blows warm air into your jacket. Just put the draw hose at the engine and put the exit hose under your jacket. The blower unit attaches with suction cups, so no paint damage. 12 volt power comes from the accessory switch on your motorcycle or other vehicle.

Easy to Install • Easy to Use
